Installation guide: neon-s

Before proceeding, choose a fitting location where the unit will be on a horizontal surface with nothing obstructing it. If you wish to install under a surface or cover, only glass or plastic are suitable. Any location under cover should be reviewed in the telematics platform at next wake-up to ensure suitability.

Step 1

Clean the surface that the neon-s is being fitted to with the alcohol wipe to ensure the proper adhesion.

Step 2

Stick the device onto the sticky pad on the installation location and ensure it is securely attached.

Replace batteries

To change the batteries of the neon-s remove the device from its fitters location. Remove the screws on the bottom of the device to access the battery location. Replace the batteries and refit the back panel and screws. Re-install using a new sticky pad if required.
